IT - Project Management - IT Business Analyst IV

Translates business needs/strategies into IT requirements and sources IT services to meet requirements (current and future). Understands end-to-end business processes, actively measures business contribution of enabling systems (functional business system measures), and initiates improvement to the process and/or systems.

Performs front-end-loading (FEL), business case development and where appropriate, leads projects. Works with business-unit-specific vendors and industry groups. Influences customer demand.

Reviews range of existing solutions available and presents options and recommendations to the customer on which ones to use. Typically 7+ years of experience. Senior level. Understands advanced aspects of discipline and is viewed as an expert in a given field.

Applies broad range of competencies to develop solutions to complex problems. Influences others to achieve objectives. Often provides specialized/technical/functional guidance to others within department and/or business asset.

Petrotechnical Resources of Alaska, LLC (PRA) is an Equal Opportunity Employer
