Project Engineer III - 35854

Accountabilities

- Review and endorse contractor deliverables and validate the feasibility, completeness, and/or accuracy. Ensure that the decisions and deliverables are in-line with and will achieve the Project priorities to include safety goals/requirements, schedule requirements, and cost efficiencies.
- Provide technical input and engineering and demolition planning support.
- Support the company's Project Manager in performance managing contractors to scope, cost, and schedule.
- Represent the company when interfacing with contractors and third parties.
- Support the company's Project Manager in coordinating and performance managing the interfaces between the project, internal organizations, and contractors, and maintaining oversight of contractor's interface management activities.
- Support project to deliver governance and verification activities to CBcp requirements.

Essential Education

- Degree in Engineering or significant industry experience in Decommissioning and Demolition.

Essential Experience and Job Requirements:

- Previous large structure, on-shore, Decommissioning and Demolition (D&D) project experience, both in planning and execution.
- Previous experience performance managing D&D contractors to scope, cost, and schedule.
- Knowledge of D&D contracting market (i.e. capabilities, execution strategies, costs).
- Understanding and experience implanting Safety Management Systems in D&D projects.
- Proven ability to communicate and effectively work with both internal and external organizations.
